~~\$X,XXX~~

The MobileMapper 100, ProMark 100 and ProMark 200 form a complete family of precision handheld GPS receivers. A variety of factory software options are available to suit the individual application. This allows, for example, the entry level MobileMapper receiver to be custom upgraded to the equivalent, top-of-the-line ProMark 200.

It is Further possible to add RTK and a network source of corrections to enable 1.5cm (0.015m) accuracy or post-process collection data for an even greater accuracy.

Tracking parallel GPS channels with an ultra sensitive high-gain internal GPS antenna and low-noise front-end amplifiers, the MobileMapper 100 boasts the fastest time-to-First-Fix, best Under-Canopy performance and the highest accuracy available in a handheld GPS receiver.

MM10 Your GIS affordable Data Collector

- Lightweight (380g) • Compact • Hi Res Colour TFT Display
- Camera • GSM/GPRS • USB • Bluetooth
